

Water Works Systems

Wells No. 8 & 9, Wells No. 8 & 9 Treatment Plants
Minooka, Illinois

Water Treatment Plant

Construction Cost

- \$5,275,000

Project Features

- 2 - 1,000 GPM Ironton-Galesville Wells (No. 8 & 9)
- 2 - Cation Exchange Water Treatment Plants
- SCADA System
- Brine Storage Tank

Three 8-Foot Diameter
Cation Exchange Units

In 2004, the Village of Minooka responded to ongoing and forecasted growth within the community by selecting Engineering Enterprises, Inc. (EEL) to provide design and construction engineering services for two new deep Ironton-Galesville 400 horsepower water wells (No. 8 and 9) rated at 1000 gpm each, two cation exchange treatment plants and a SCADA system to monitor and control the new improvements together with their existing Water Works System.

The water treatment plants for Wells No. 8 and 9 each consist of three 8 foot diameter cation exchange units, one brine tank, one surge tank, chemical feed equipment, laboratory equipment, piping and controls.

The SCADA system was built on Allen Bradley PLC protocol with a new central computer located at the Public Works Facility operating on the Wonderware programming format. Communication for all of the sites is through spread spectrum radios.
